Holtzman

Hao  
Fang

Maarten  
Sap

Hao  
Cheng

Teams of university students try to build a **socialbot** that

- converses coherently and engagingly with people
- on popular topics and current events.

Advisors: M. Ostendorf, Y. Choi, N. Smith

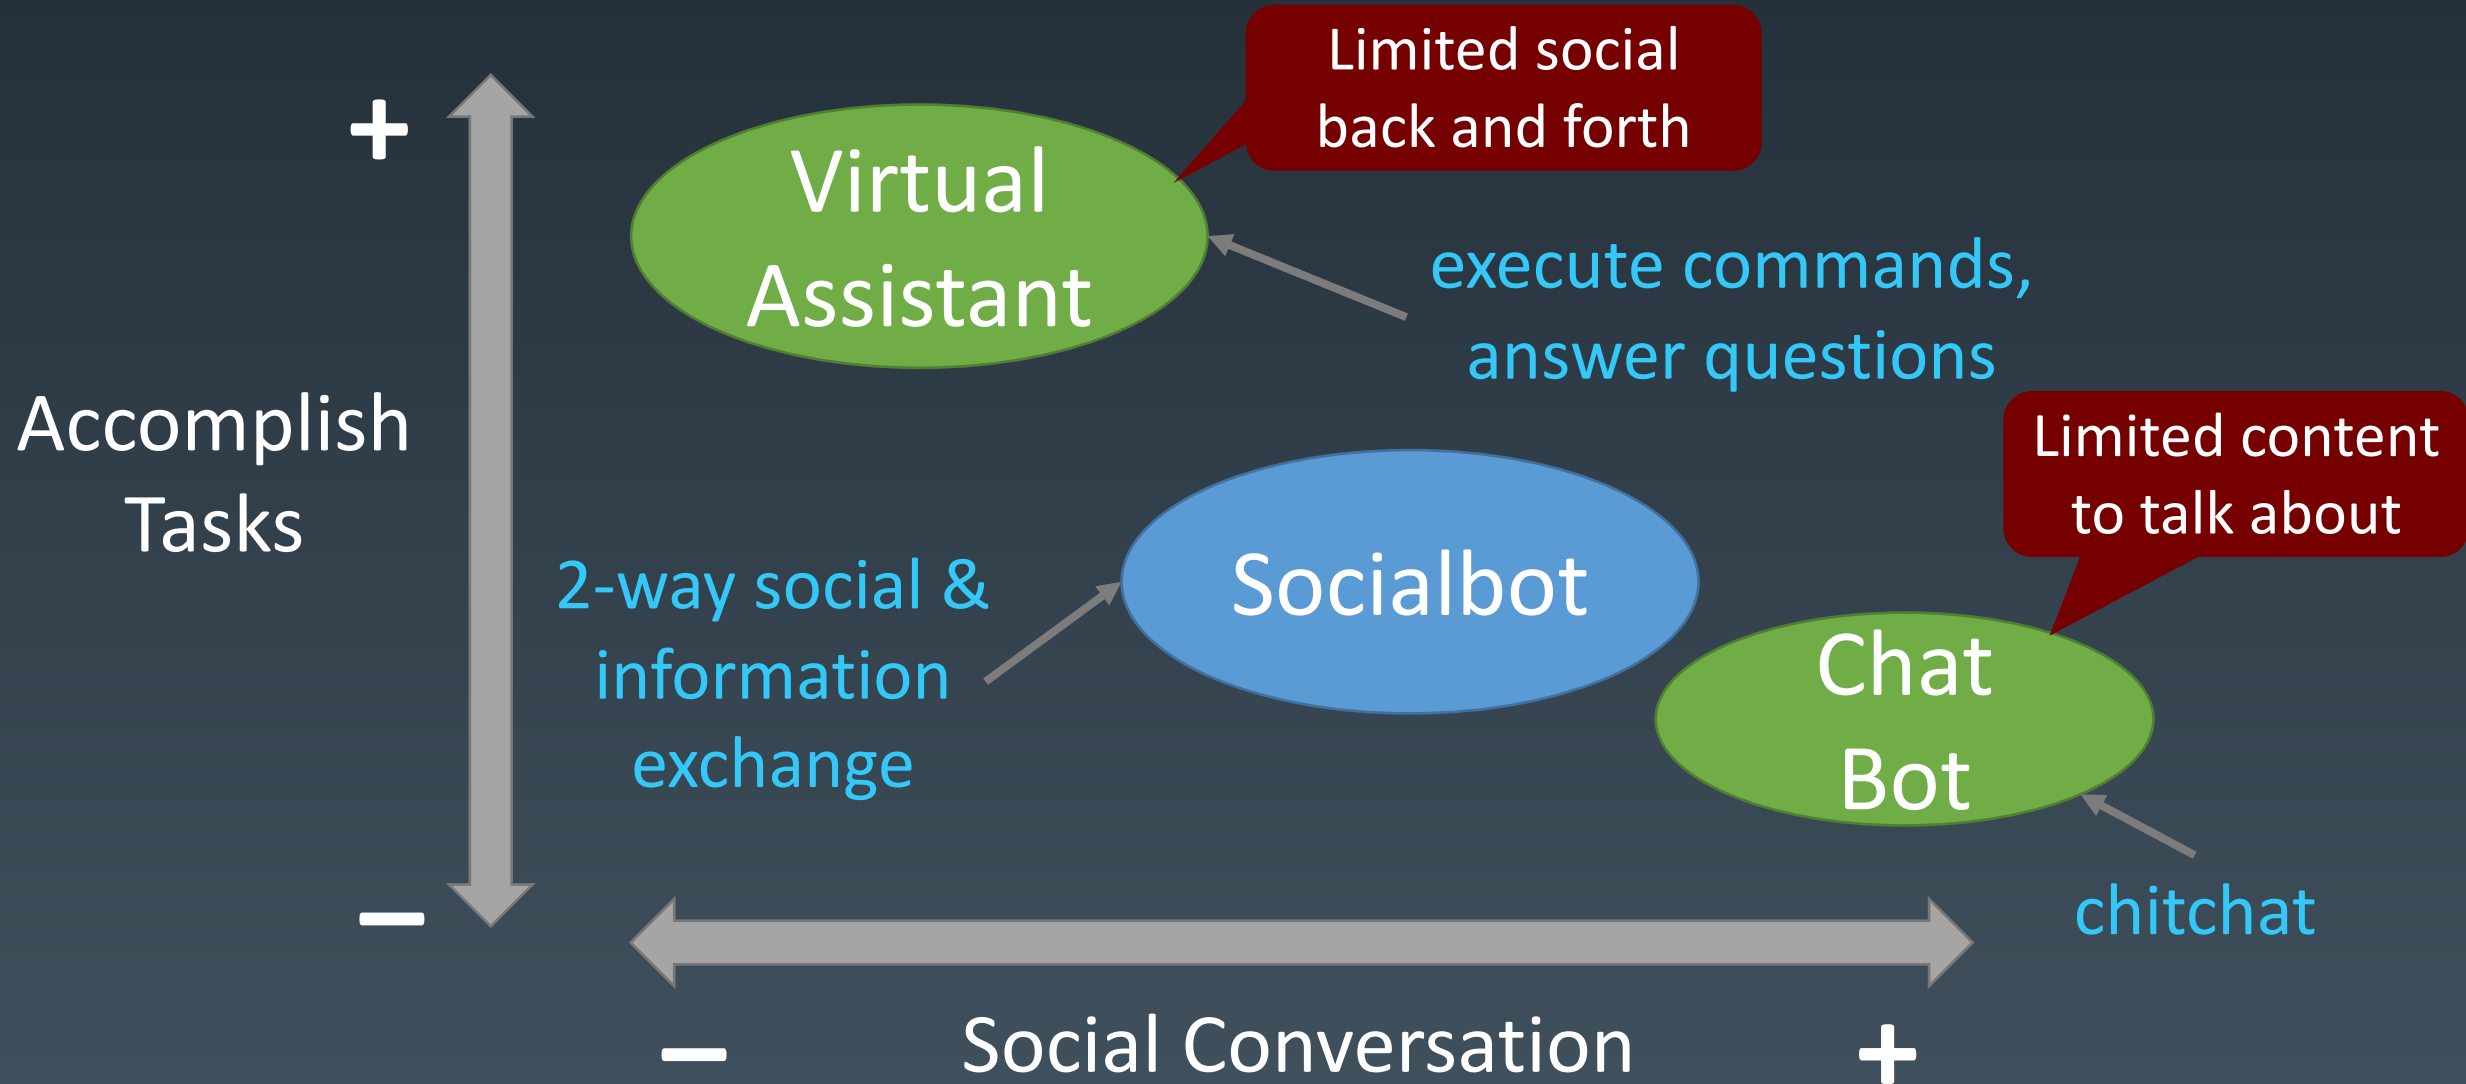

# Roadmap

- Context: conversational artificial intelligence
- Sounding Board system
- Characteristics of real users & leveraging them
- Parting words

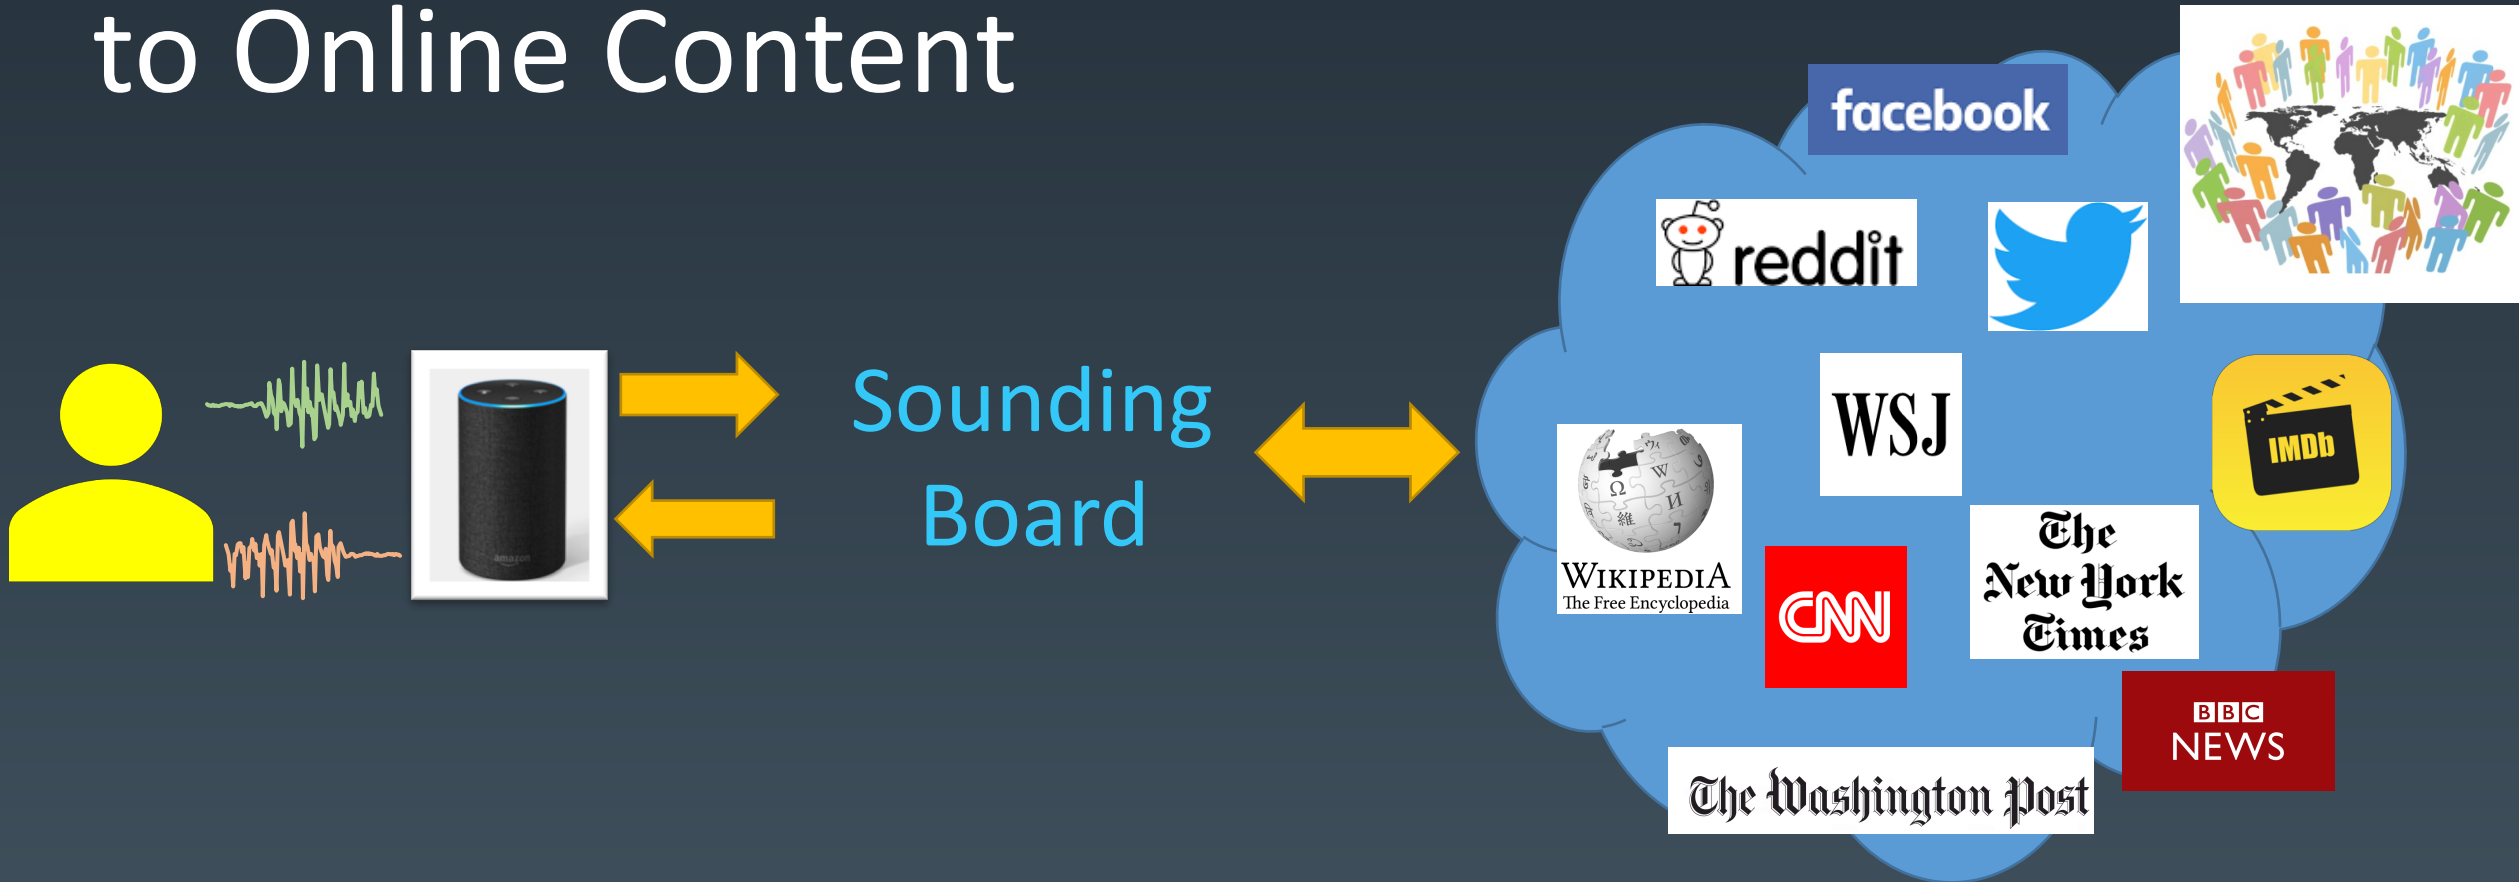

# Types of Conversational AI Systems

# Sounding Board: A Conversational Gateway to Online Content

Turn	User	Sounding Board
1	Let's chat	Hi! This is an Alexa Prize socialbot. How's your day?
2	I'm <u>five</u> .	Glad to hear it! We could talk about robots, batman, or superman. Say "next", to chat about other things.
3	Superman.	It looks like you wanna chat about superman. I was high up in the cloud when I realized: If people don't recognize Clark Kent as Superman because of his glasses, does his eye doctor know his true identity?
4	I guess so.	Did you know that Henry Cavill almost missed the call for the role of Superman cause he was playing "World of Warcraft"
5	Really, I didn't know that.	Weird, right? Speaking of superman, Did you see: Superman? It was released in 1997. It's a comedy.
6	Yes, it was hilarious.	I'm glad you feel this is hilarious. Which part do you like best about this movie?
7	The part when he met lewis leah.	Interesting. meccartin, and raffi co-directed this film. The movie has a 6.3 out of 10 on IMDB. which seems pretty good! do you like the movie's director?
8	Yeah, he's cool.	Cool! By the way, do you wanna know something interesting about raffi?
9	Okay, go ahead.	Super! My friend told me that Raffi is a worldwide children's rights activist and has fought against exploitative advertising to children.

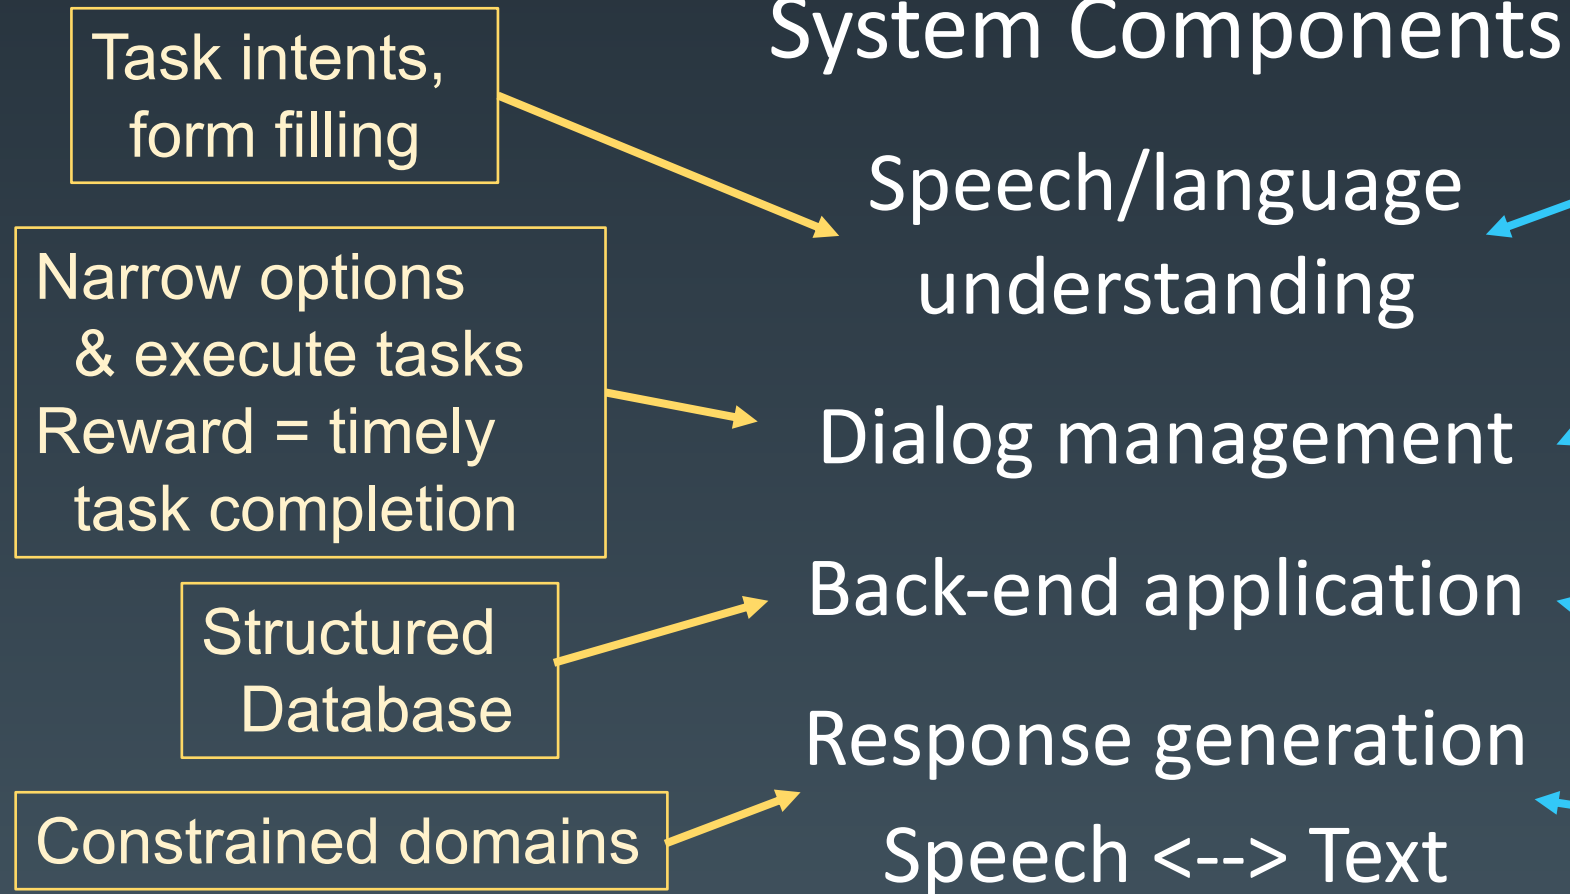

# Sounding Board – System Overview

# Differences in Conversational AI Paradigms

## ASSISTANT

## SOCIALBOT

# Design Philosophy

- Content-driven

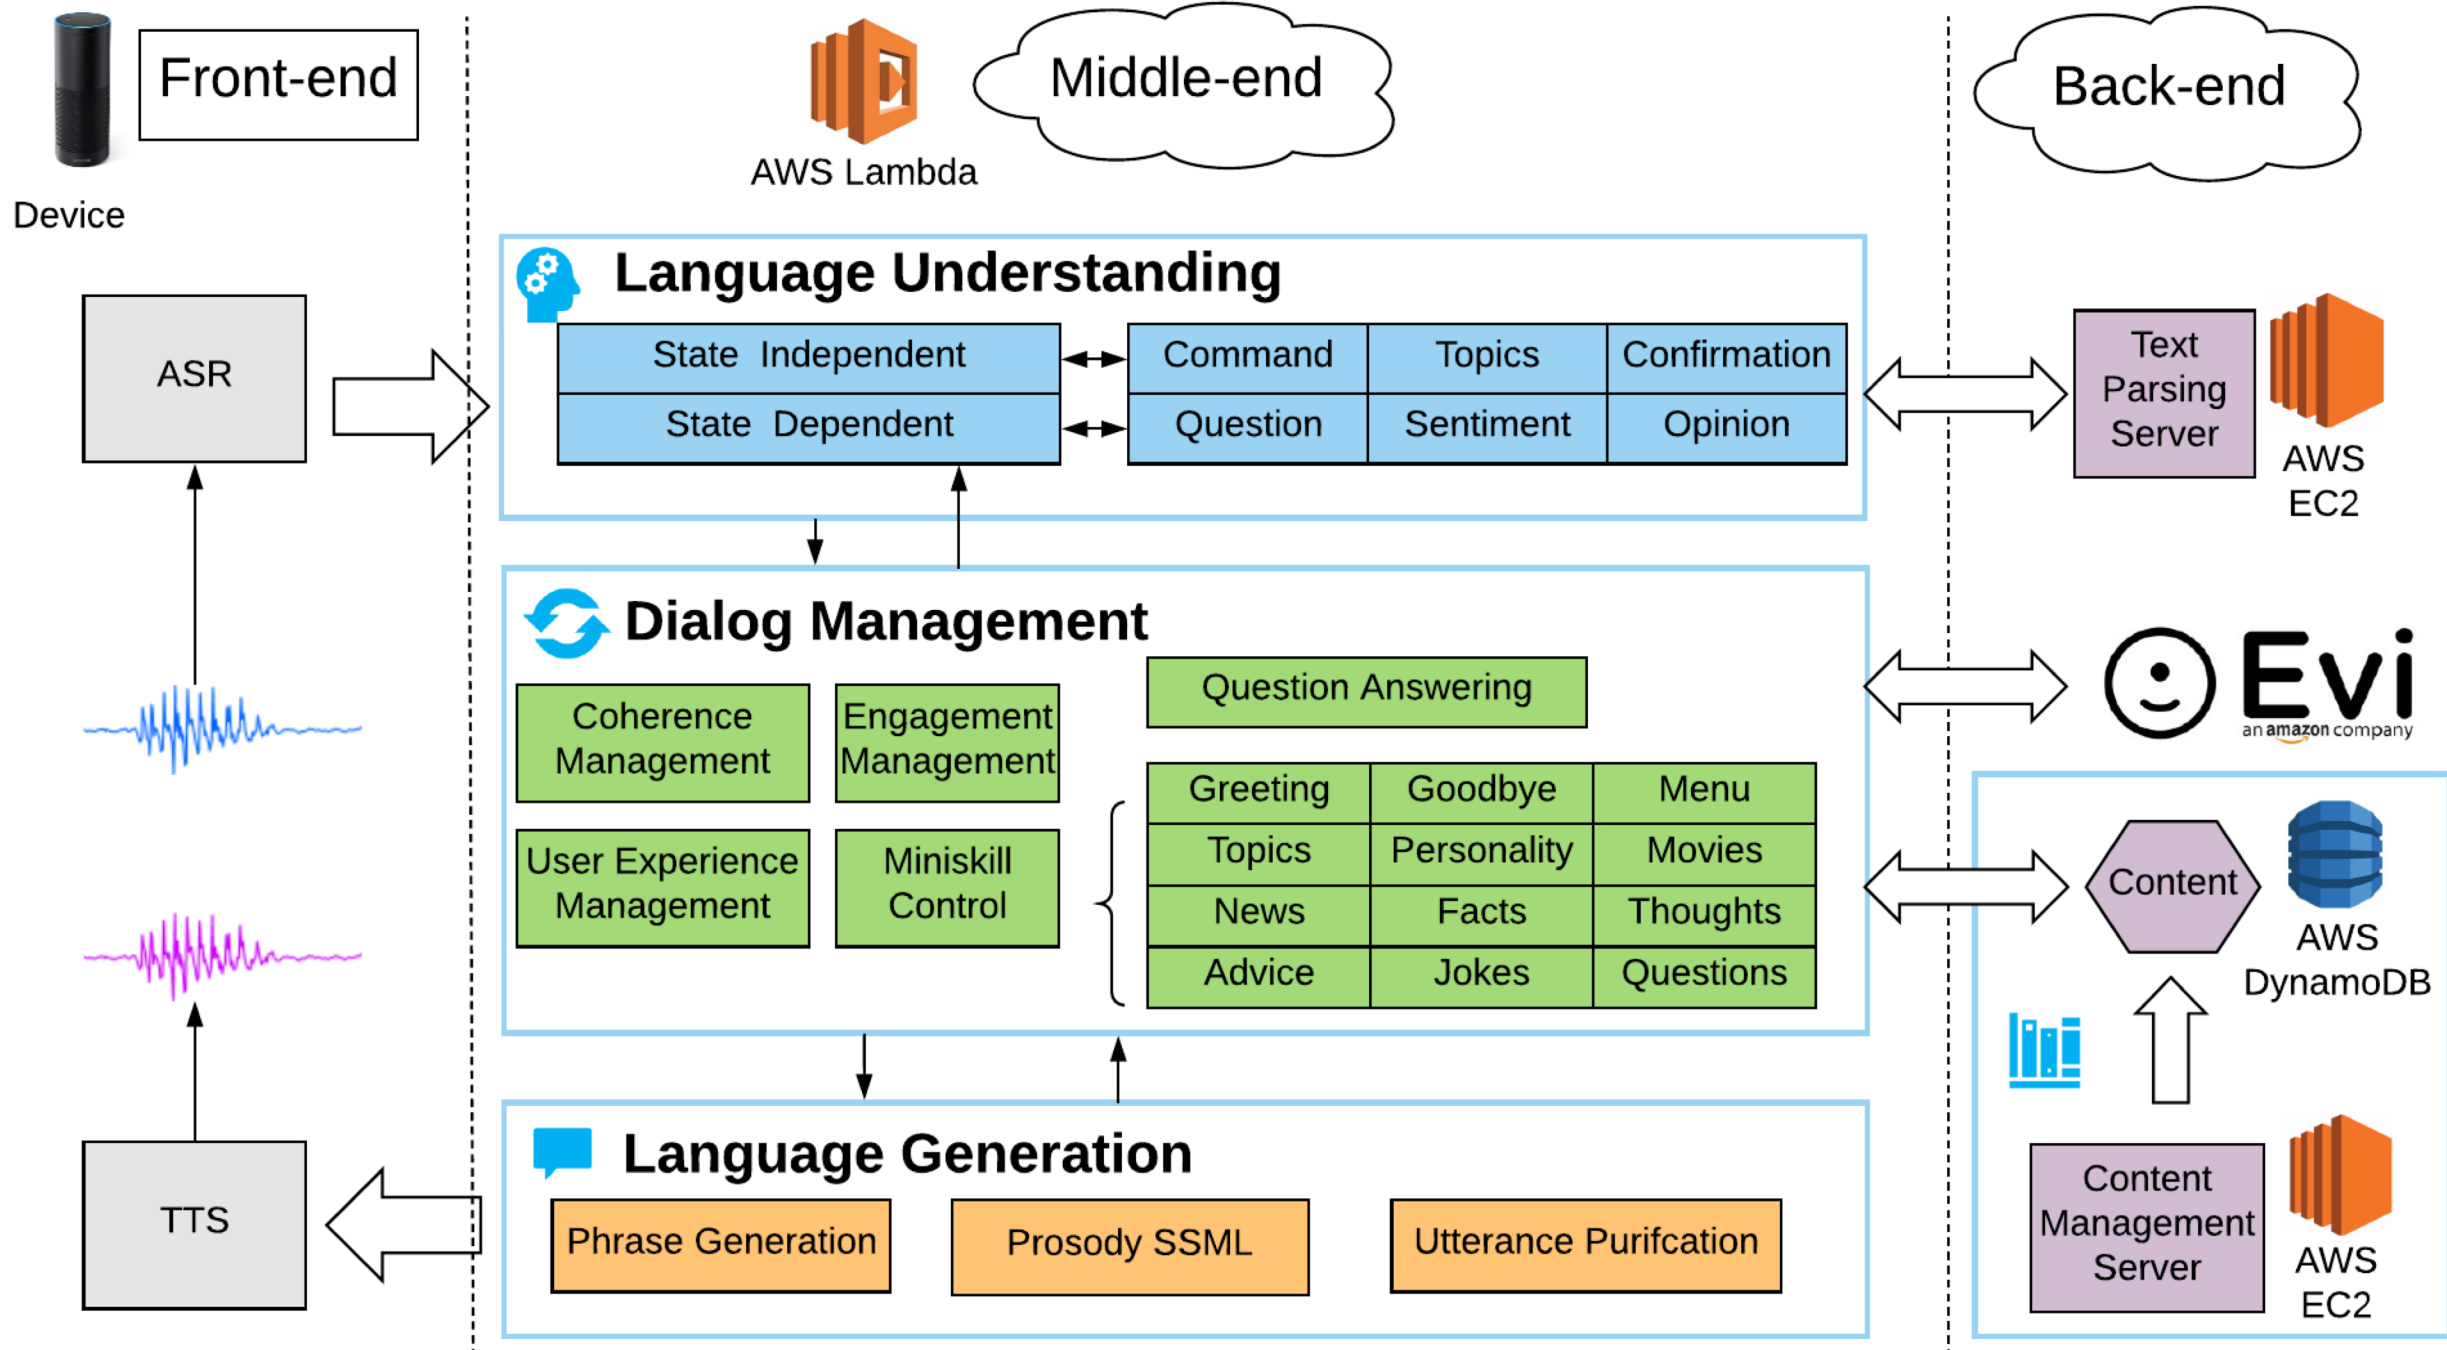

- Daily content mining, large & dynamic content collection
- Knowledge graph
- Dialog manager promotes popular content, diverse sources

- User-centric

- Language understanding detects user sentiment
- Try to learn user personality & interests for content selection
- Language generation with grounding

# Hierarchical Dialog Management

- Master (Global)
  - Rank topics, miniskills, content
  - Consider: topic coherence, user engagement, content availability
- Miniskills (Local)
  - greeting / goodbye / menu
  - probe user personality
  - discuss a news article / movie
  - tell a fact / thought / advice / joke

# Evaluation – AlexaPrize Protocol

- Users (judges) rate conversations on a 1-5 scale
- Duration of conversation (tie breaker)

	Rated by	Rating	Duration
Finals (mid Nov 2017)	Judges	3.17	10:22
Post-finals (Nov 24 – Dec 24)	Alexa owners	3.65	4:30

# So what's a nice EE like me doing in a field like this?

- I'm an expert in speech signal processing and I can't use the audio signal! (for privacy reasons)
- Actually, a word sequence is a signal
  - Project discrete word representations to continuous vector space
  - Integrate language, image, audio in multi-modal processing
  - Leverage signal processing methods in neural models:  
rank reduction, sparsity, basis vectors, adaptive models...
- I get to work with data from real users

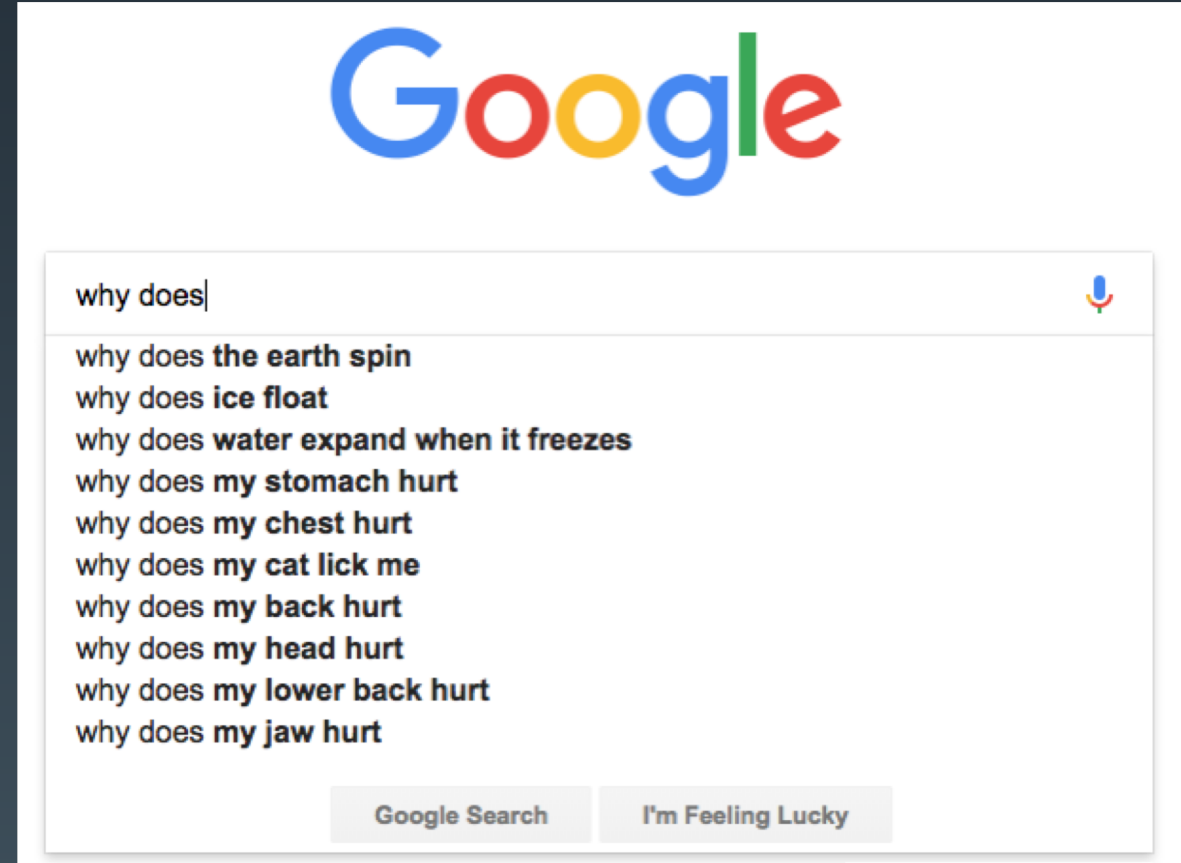

# Characteristics of Real Users

*(from 10M Sounding Board Conversations)*

# Importance of User Modeling

- User interests vary
- For text-based search, personalized query completion improves over popular queries
- In conversational search, user language can augment topic history

# Content Preferences Vary

Did you know that Malaysian vampires are tiny monsters that burrow into people's heads and force them to talk about cats?

## *Amused*

Oh you are so funny.

Oh my god that's funny.

## *Not amused*

That's not true.

Oh gods are you have to hear this.

What the heck.

## *Not really listening?*

Cool.

Wow that's interesting.

That's awesome.

## *Cat lover*

Cats are my favorite animals.

Let's talk about cats.

That's creepy.

## *Talkative User*

# Interaction Styles

## *Terse User*

- So you're saying mean is a type 2 diabetic art is junk food
- No I'd rather go back to talking about vampires
- I love vampires the something that I really loved do you know and rice the author
- it is weird i don't understand
- Yes I would
- i don't know that's an interesting question and is it really true that garlic keeps vampires the wedding and what i
- what are they have their long fingernails for
- i think that that's probably true but i think it vampires are evil and they don't care about sustaining things for human be-...

- Cool
- One excuses enough
- No thanks
- No
- No
- Sure
- Yeah
- Yeah
- No I didn't know that
- No
- Yeah
- No

- No
- Yes
- Cool
- Yeah that's cool
- No I didn't
- No
- Yes
- No I didn't know that
- No
- Yes
- Cool
- ...

# Different User Goals

## ○ Information seeking

Tell me more about that.

What is that?

Why?

i don't know that's an interesting question and is it really true that garlic keeps vampires the wedding and what i

## ○ Opinion sharing

i think that that's probably true but i think it vampires are evil and they don't care about sustaining things for human be-

## ○ Getting to know each other

What's your favorite video game?

My favorite video game is minecraft

# Adversarial User Examples

- Taboo topics

Alexa, are you naked?

I'm a chatbot.

- Offensive language

@#%\*#\*!!.

I heard you mention unicorn. I'll do some research on that. How about we talk about some news about artificial intelligence?

- Venting

You suck.

Unfortunately, I'm not sure I understood what you said.

# Challenges with children ....

yeah can i get my butt hampshire suspense  
are there was a cough sure stop

No problem. Let me think. How  
about we chat about...

Let's talk about Santa Claus!

You know what I realized the other day? Santa  
Claus is the most elaborate lie ever told.

# User Personality Types

- Include personality quiz questions in the conversation
- Personality correlates with user ratings
  - Extroverted, agreeable, open -> higher ratings ( $p < .001$ )
- Topics brought up by users
  - Introverts (AI, food, cats), extroverts (news, fashion)
  - Open & imaginative (AI, time travel, aliens)
  - Low conscientiousness (pokemon, video games, minecraft)

# Implications

Spoken  
Language  
Understanding

Age & dialect impact ASR;  
verbosity impacts NLP

Dialogue  
Management

Content ranking (sources, topic, entities)  
Error handling, follow-up strategy

Content  
Management

Flag rather than filter controversial content  
Multi-dimensional content index (e.g.  
ratings of user types)

Language  
Generation

Politeness, repetition rephrasing

# Socialbot User Modeling

- Problem: Content recommendation, leveraging
  - Engagement with content earlier in the dialog
  - Age/personality factors reflected in language use
- Challenge: *User-topic engagement data is sparse*
- Solution: Dynamic user state
  - Map user language & topic content to vector spaces
  - Recurrent update of user state vector; input = vectors of user language, accepted & rejected topics
  - User state + content vector  $\rightarrow$  content ranker

# Sounding Board – Parting Words

- A socialbot can serve as a conversational gateway to the web, but there are many other applications
- Critical system capabilities
  - Track user intent & engagement, learn user interests
  - Manage dynamic, unstructured content
- ML Challenge: Dialog policy learning given
  - A sparse, subjective reward signal
  - Evolving system capabilities & user behavior

**Thank You**
